The NEW Gen 325 alarming tether has all of the ease of our original Gen 3 Mousetrap Tether but, it allows you to replace the alarm component, the retractable tether, or just the battery with ease also! No need to remove the tether from the merchandise or the fixture, costing valuable labor. Allows you to reuse the functioning part of the unit saving you on product cost and saving space in landfills. Even with our discreet 7 strand steel wire we now have 120 lb. pull strength. Alarming function is easily activated with no tool necessary and with a discreetly placed hole that cannot be manipulated without the Decoder. Turn unit off with handheld All-n-One Decoder or easy on/off switch. Larger battery; 3-5 year standby time. New and improved barrel style T-Stop to secure tether "lead" position, preventing smaller merchandise from being pulled off balance and allowing proper merchandising of displays. The new housing design provides for perfect placement of the decoder's IR and magnetic release to allow for quick and easy deactivation, clutch release, or battery replacement.
